Colors

- Initial Style Guide
- 4 colors to match SUNY Farmingdale Colors
- Poppins: chosen because of its readability and legibility

Initial Designs – Assets

Accordion Style Nav-Menu Buttons:

Menu Option

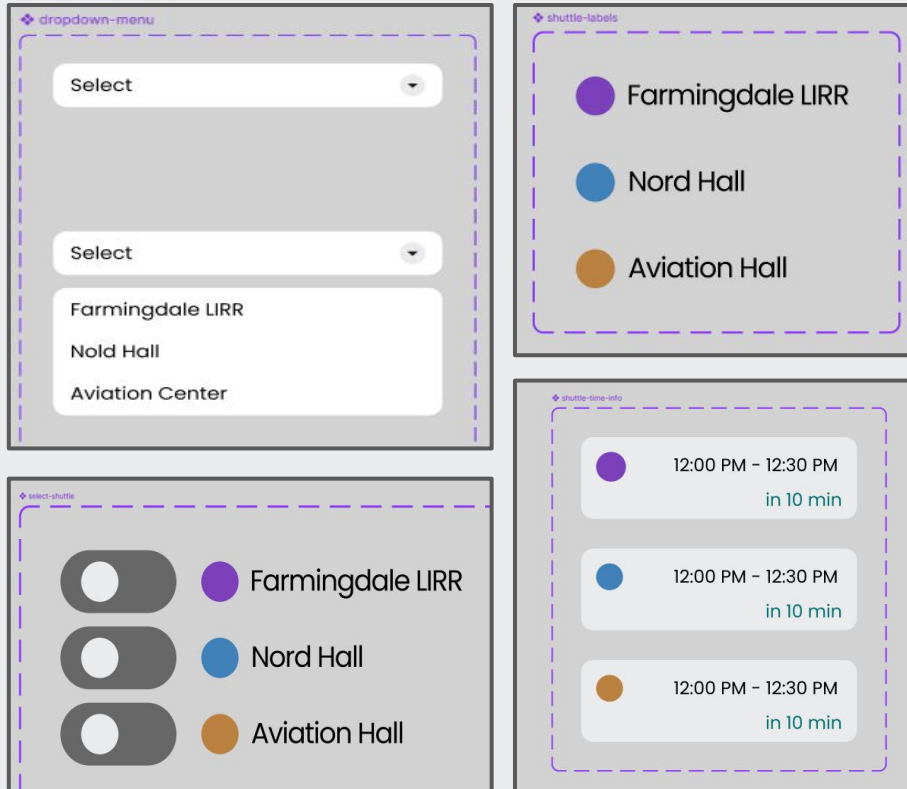

Menu Option

"Lorem ipsum dolor
sit amet,
consectetur
adipiscing elit, sed
do eiusmod tempor.

- Initial assets created that would be used to simulate app interactivity
- Toggle switches, buttons, hamburger menu icons, and menu buttons

Initial Designs – Assets (cont.)

- The initial assets that were created were then used to make toggle switches that allow the user to select a shuttle route (shuttle stops are also color coded)
- Assets were also created to simulate a dropdown menu where users can choose a route to display shuttle time information

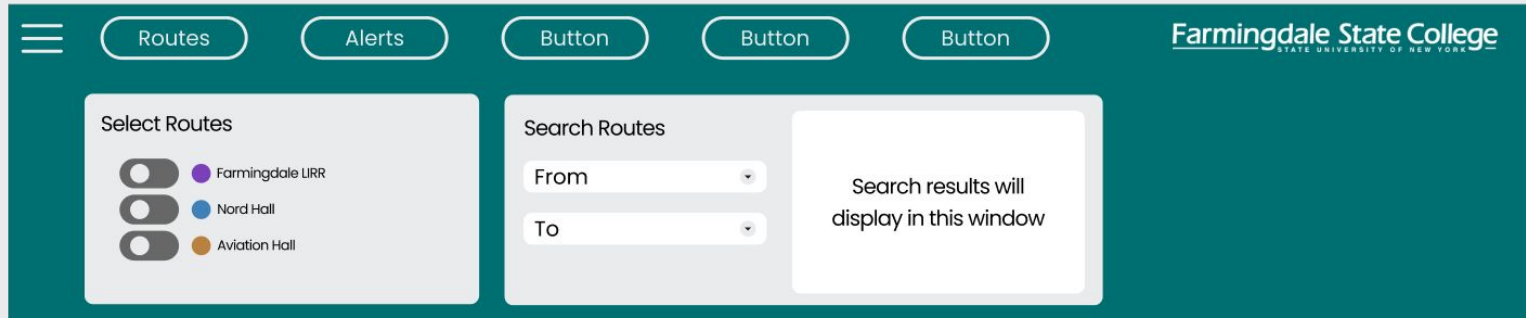

Design Experiment 1 – Navigation Menu

- The Navigation Bar for the application was initially designed to be displayed horizontally, and users could click a button to expand the menu to display interactive screens. This design was changed later on (more on that later).

nav-menu-closed:

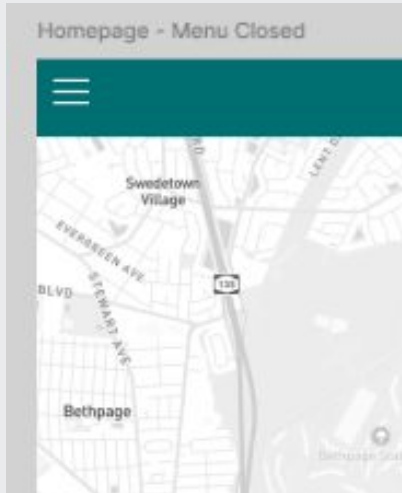

nav-menu-open: Pictured here is the "Routes" menu option being displayed where users can select routes and search routes

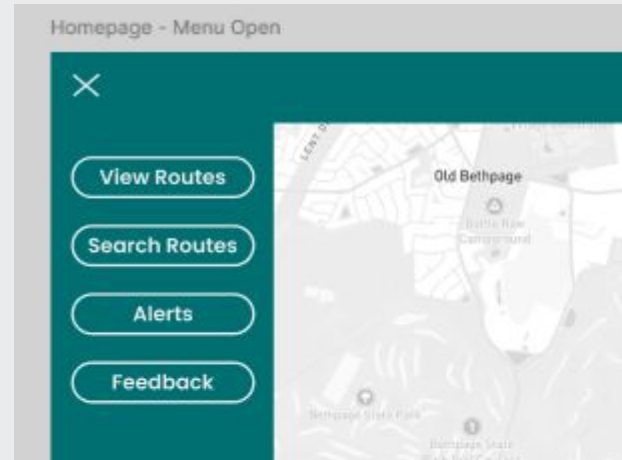

Design Experiment 1 – Navigation Menu (cont.)

- The Navigation menu was redesigned to appear vertically rather than horizontally. This design change improved the appearance and navigation of the menu elements. The horizontal menu took up screen space that could be used for other interactive elements on the page.

Design Experiment 1 – Navigation Menu (cont.)

Before redesign:

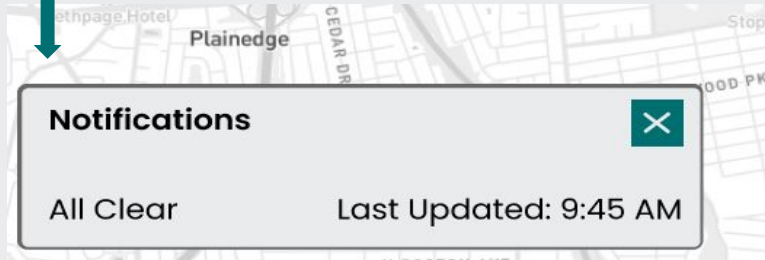

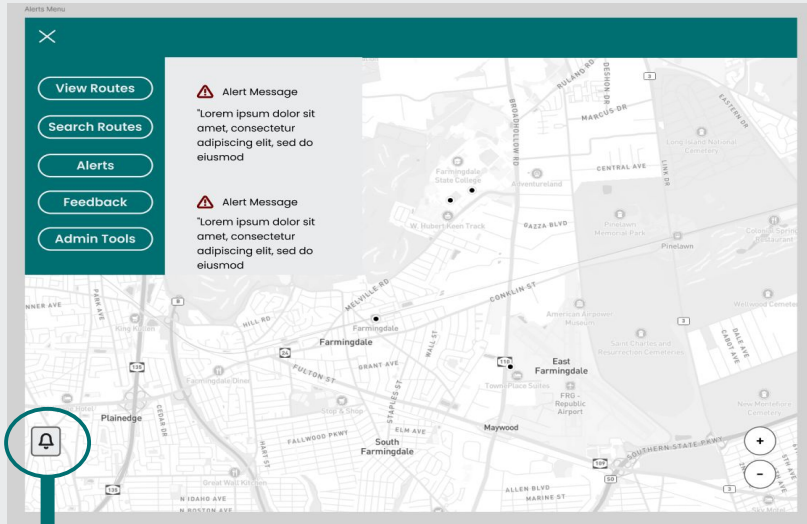

After redesign:

- The Navigation Menu redesign also meant that the interactive screens would have to be redesigned as well. Interactive screens displays to the right of the menu when a button is clicked, rather than underneath it.
- To further decrease the space the menu took on the screen, the buttons “View Routes” and “Search Routes” were created to separate these functionalities, rather than having them both under the “Routes” option

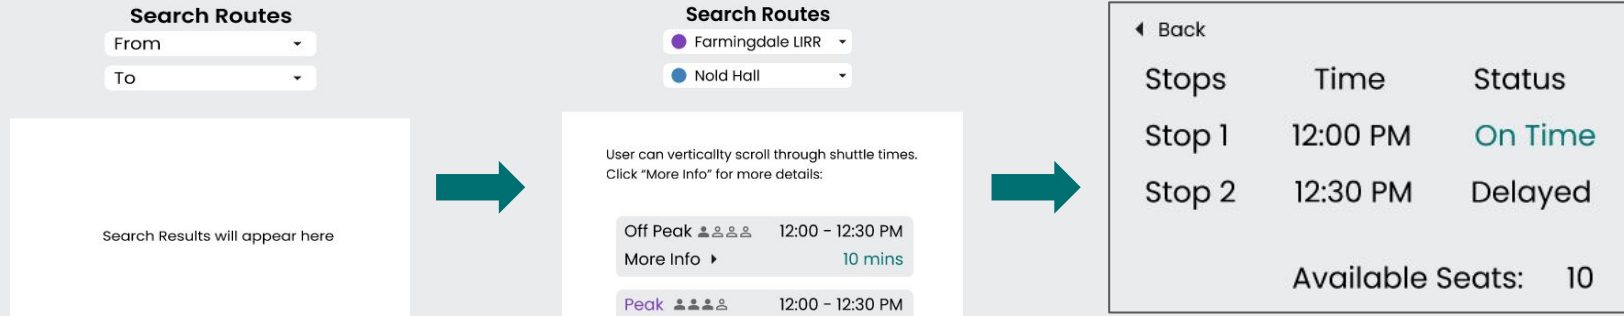

Design Experiment 2 – Alerts and Notifications

- An alerts bar was created to display a list of warnings such as: shuttle delays, traffic encounters, inclement weather etc.
- We also had a notifications bar that would provide the same information.
- We decided to remove the Alerts menu option to avoid redundancy, and use the notification bar exclusively for shuttle alerts.

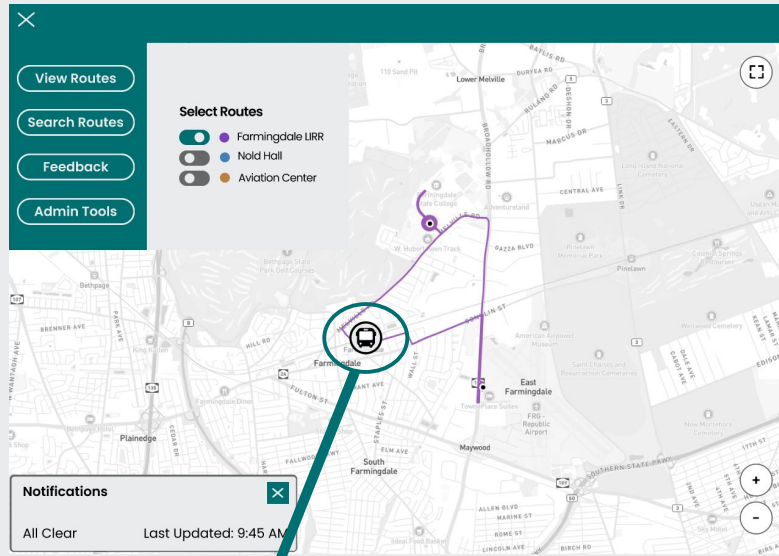

Design Experiment 3 – Displaying Shuttle Info

- Users can display shuttle information in two ways, the first way shown below is through manual search:

- After searching, users can see a schedule displayed: It has information about the ETA, how crowded the bus is, and if it is Peak or Off Peak.
- Users can also click "More Info" to see specific information about stop delays and seat availability.

Design Experiment 3 – Displaying Shuttle Info (cont.)

- The second way users can display shuttle information is through interacting with the map.
- A bus icon was created so that when a user hovers over it, it will display live shuttle information based on which route is selected.

Live-bus-info-farmingdale

Location	ETA
Farmingdale LIRR	less than 2 mins
Aviation Center	11 mins
Nold Hall	11 mins

Live-bus-info-nold

Location	ETA
Farmingdale LIRR	less than 2 mins
Aviation Center	11 mins
Nold Hall	11 mins

Live-bus-info-aviation

Location	ETA
Farmingdale LIRR	less than 2 mins
Aviation Center	11 mins
Nold Hall	11 mins

★ The images to the left show the “Farmingdale LIRR” route selected, so when the user hovers over the bus icon, the purple live shuttle information screen is displayed.
